

Eurosafe Solutions are installers and distributors of Latchways ManSafe® fall protection systems for Australia.

Architects are now able to specify a roof safety package using the Latchways Constant Force® post. The Constant Force® post is approved for installation on the major roofing systems.

The Constant Force® posts are top-fixed to the roof sheet by a process that does not compromise the integrity of the roof. Equally important, in the event of a fall, the Constant Force® post has an integral energy-absorbing coil that limits load to a predetermined level. The load transferred onto a roofing panel is guaranteed not to exceed 10kN.

The Constant Force® post provides full technical and aesthetic compatibility with modern roofs while meeting all the regulatory requirements for protecting worker safety at height.

Eurosafe Solutions also offer architects and designers a range of valuable services to ensure designing safely and efficiently.

- Latchways ManSafe specification templates
- Literature – Specifiers Manual and ManSafe brochures
- Design services
- AutoCAD drawing facilities
- NATSPEC product partners
- Complimentary project consultation
- RIBA-approved CPD Seminar
- Valuations/quotations for calculating project budgets
