

## Cleaning and maintaining your Minosa Basin

Cleaning of your Minosa Basin is trouble-free. The day to day cleaning is as simple as wiping the surface with a soapy sponge, followed by a rinse; the superior material used to create your Minosa basin is Corian® by Du Pont®. It is easy to clean and very easy to live with.

### Most dirt & grime

Use soapy water or an ammonia-based cleanser (e.g. Spray n' Wipe) along with a damp sponge or cloth. Rinse clean. Avoid using abrasive scouring pads for day-to-day cleaning.

### Water marks

Wipe your surface with a damp sponge or cloth and towel dry. Hard water leaves visible water marks on Corian®, just as on glassware, which is why it should be wiped dry with a soft cloth. If marks persist, try the method below for stubborn stains.

### Stubborn stains

For more stubborn stains you will need to occasionally give your Corian® surface a more thorough clean and refresh using a mild abrasive cleanser like Gumption®\* paste cleanser or Jif Cream cleanser. Firmly wipe your Corian® surface with a damp sponge or cloth and a mild abrasive cleanser using a wide circular motion. Always finish by rinsing and wiping your surface with a damp cloth or sponge. The Vileda® range of cloths and non-scratch scourers are recommended by both Corian® and Teflon®.

### Light marks & scuffs

Most light marks and scuffs may be removed by wiping your surface firmly with a damp sponge or cloth and a mild abrasive cleanser. However, if this technique fails to work, please contact Minosa on 02 9550 0234 to personally discuss other care alternatives.

Generally, using abrasive cleansers on your basin regularly may change the sheen level. By routinely cleaning the entire surface consistency the sheen should return over time. Please note surface sheen is not covered by the warranty.

*Please note that green Scotch-brite™ pads should not be used on your basin*
